

MD Shahriar Hossain

Software Engineer · JavaScript · Python · React · Next.js · Node.js · Express · PostgreSQL/MongoDB/ MySQL · Open to Junior Roles & Internships

shahriar1181@gmail.com +880 1906127394 Mirpur-10, Dhaka, Bangladesh [github.com/Shahriar1638](#) [LinkedIn](#) [Portfolio](#)

SUMMARY

Software Engineer with a strong self-directed learning and hands-on experience building end-to-end web applications using React, Next.js, Node.js, Express, MongoDB, MySQL and SQL/NoSQL databases. Skilled in designing REST API architectures, AI-driven features and workflow orchestration, Secured JWT/RBAC auth, Frontend optimization with code-splitting, client-side caching and input validation and Stripe payment flows with server-side integrity checks. Comfortable owning the full engineering lifecycle: API architecture and security hardening, relational and document schema design, async job orchestration, and cloud deployment. Strong CS fundamentals in System Design, DSA and OOP, with additional experience in ML/DL. Open to internships or junior Software Engineer roles where I can contribute to real-world engineering challenges

SKILLS

Languages	JavaScript, TypeScript, Python, PHP, C, HTML5, CSS3
Backend	Node.js, Express.js, REST APIs, JWT, Redis, BullMQ, RBAC
Databases	PostgreSQL, MySQL, MongoDB, Database Normalization, Schema Design, SQL
DevOps & Tools	Git, GitHub, Docker, Firebase, Vercel, Render, Linux
Frontend (Sec.)	React, Next.js, TanStack Query, Tailwind CSS
ML / DL (Bonus)	PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas

EDUCATION

B.Sc. Computer Science — BRAC University	2022 – 2026
CGPA 3.31 / 4.00 · 124 / 124 credits completed · Graduation: Spring 2026 (June)	
Higher Secondary Certificate — Monipur H.S. & College	2020
GPA 4.17 / 5.00	

PROJECTS

SurveyHub — AI powered Full-Stack Survey SaaS Platform	live · github
<i>React · Node.js · Express.js · MongoDB · JWT · Firebase Auth · TanStack Query · OpenRouter · BullMQ + Redis</i>	
- Optimized frontend performance with React.lazy code splitting, TanStack Query optimistic updates with rollback, and Axios interceptors for secure JWT injection and global error handling - Architected resilient AI fallback with key rotation and Redis-backed expiry pipeline, enabling automated survey insights, moderation, and graceful cache-degraded aggregation. - Engineered modular RBAC middleware with testable auth guards, compound indexing, and soft-delete retention, integrated with Stripe Checkout for atomic wallet deductions and race-condition-safe payment integrity.	
BizNest — E-Commerce Platform	live · github
<i>React · Node.js · Express.js · MongoDB · Mongoose · JWT · TanStack Query · Stripe</i>	
- Designed a robust REST API with custom JWT authentication/authorization middlewares, supporting diverse roles workflows while hardening backend security with Helmet.js headers, CORS, and Express rate limiting. - Integrated Stripe Checkout with server-side price verification against database records, ensuring payment integrity and preventing client-side cart tampering. - Architected a decoupled React frontend using the Facade pattern with custom hooks for API abstraction, and applied aggressive TanStack Query caching to minimize redundant network requests.	
Grocery Hub — Database Management System	github
<i>PHP · MySQL · Relational Database Design</i>	
- Designed a normalized relational schema in MySQL covering products, orders, inventory, and user accounts with foreign key constraints and indexed queries. - Built a full-cycle ordering workflow in PHP (browse, cart, checkout, inventory management) with a minimal MVC-inspired structure	

RESEARCH

Multi-Omics Sarcoma Subtype Classification & Prognosis	2025 – 2026
<i>Undergraduate Thesis · Gated Attention + DAE + MLP · PyTorch · Scikit-learn</i>	
Designed a custom deep learning pipeline (Gated Attention + DAE + MLP) with Pandas/Scikit-learn for multi-omics alignment, normalization, stratified splitting, and prognostic feature discovery across sarcoma subtypes.
